

A history of service.

For nearly three-quarters of a century, Cass Screw Machine Products has consistently delivered high-quality machined parts to its customers. Beginning in downtown Minneapolis in the 1940s, Cass has always placed its primary emphasis on customer service, stretching to meet our customers' needs and growing with them. As a result, we've become more than a Midwestern machine shop. We're a player in the global market, shipping parts to the Czech Republic, China, and Mexico, for example. Now, as always, we "go the extra mile" for you.

Parts for anything and everything.

Each part we produce fulfills a specific need. Each is part of a collection of components used to make a whole product, an essential piece of the puzzle. At Cass, we make parts for lawn mowers, snowblowers, snowmobiles, motorcycles, backhoes, skid-steer loaders and vehicles used in the nation's defense. From domestic use to military, from agriculture to watersports, our precision components are delivered at fair prices and scheduled to meet your just-in-time requirements.

Partnerships forged through the years.

Over the years, we've come to work with a select group of vendors, platers and heat treaters who put the finishing touches on many of the parts we produce. They know how important your business is to us, and they know that we're sticklers for quality. They do everything they can to get your fast turn-around orders done correctly and on time.

Cass Screw Machine Products

We Go The Extra Mile

Over 60 years of precision machined parts and service.

Precision and flexibility.

Whether it's an auger rod for a snow-blower or a part that requires close tolerances, Cass has the tools to manufacture the parts you need.

Automatics.

Our six- and eight-spindle automatic screw machines allow us to fill large and small orders, with diameters up to 3.5 inches. These cost-efficient machines are the backbone of our operations.

Grinding.

Our in-house grinding department eliminates the need to send parts out for secondary operations. That saves you time and money, and assures quality every step of the way. Our CNC cylindrical grinders, centerless grinders and O.D. grinders are at your disposal.

CNC Machining.

Our Mazatrol machine handles two-step operations at once. While one part is being finished, its successor is machined. It's a real timer-saver! We also have a complete line of CNC robotic loaders, pallet changers, mills and lathes.

EDM.

One of the most accurate manufacturing processes available, electrical discharge machining is great for producing parts with complex or simple shapes. When you need something out of the ordinary, we have the machine to make it.

The on-shore advantage.

Let others buy inferior parts from abroad. When you need just-in-time delivery of high-quality parts, come to Cass.

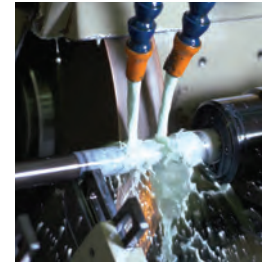

With electronic data interface (EDI), we can keep a close watch on your parts inventory and deliver the materials you need, when you need them. Freight costs are always a factor, but our Midwest location puts us equidistant with all regions of the U.S. We do everything we can to meet your schedule.

Quality is important to you. That makes it important to us.

Everything we make passes several inspections, or it won't go out the door. We hold monthly quality reviews to assess our quality and productivity. We're not afraid of change. If something isn't right, we fix it. We ask our employees, "Would you buy what you make?" The answer has to be "yes!"

Cass is ISO 9000-compliant.

You matter to us.

Our customers mean everything to us. You're the reason we exist. You've contributed to our success, and we want to contribute to yours. We prefer long-term relationships. When you have a question or concern, we make it a point to respond to you right away.

Our people—the power behind Cass.

Our large array of machining tools would be worthless without the people who run them. Our people really make the difference between Cass and other machine shops. We invest heavily in them and treat them like members of our family. The result is low turnover, longevity and high productivity. They take pride in knowing what they're making, and for whom. As one of our employees said, "Our quality sells the parts. The parts sell the company."

We have confidence in our employees and our abilities. Our customers have confidence in us.
